Height/Weight: 52.18 inches 56.10 pounds BMI (Body Mass Index): 14.48
BMI % for age: 11.10%

The Federal Government's Center for Disease Control (CDC) has requested that the BMI and Percentile for Age be calculated yearly. This request is a result of the increased prevalence of overweight and underweight conditions in our population, especially our children. These conditions are associated with the development of chronic illnesses during adulthood. We need to start addressing these issues as soon as they become apparent, in the hopes of a healthier nation.

***BMI is a measurement that helps determine whether a child's weight is appropriate for his/her height. The percentage shows a comparison of your child's BMI to others in the same age group. The American Academy of Pediatrics suggest a consultation with your child's physician if your child's BMI falls below 5% or is equal to or greater than 85% (More information can be found at <http://www.cdc.gov/growthcharts>).**

Please contact your child's certified school nurse with questions or concerns.
